Do you have a process to check if there is any asbestos on site?	It's important to be proactive in looking for asbestos; you don't want to realise it's asbestos after people have been exposed. Where can you find asbestos?						
Has an asbestos survey been undertaken by a competent person to identify asbestos containing materials?	Asbestos surveys should be used to maintain a register of all asbestos containing materials, their location and condition.						

Asbestos Site Checklist

Question	Help!	Yes / No / N.A.	Comments / positive observations	Actions required	L/M/H	Responsible person / company	Completion date
<p>Do you have a process to determine if asbestos work needs to be carried out by a licensed contractor?</p>	<p>Some small asbestos tasks can be handled by non licensed persons with the right equipment, but most asbestos work must be carried out by professionals.</p>						
<p>If you carry out non licensed work with asbestos do you have all the correct controls in place?</p>	<p>Even working with very small quantities of asbestos can be dangerous. It is imperative that all the correct controls are in place. Specialist advice should be sought if required.</p>						
<p>Are all workers give basic Asbestos Awareness Training?</p>	<p>It's a good idea to give all workers a basic tool box talk on the dangers of asbestos. They should know where asbestos might be found, how to spot it and what to do if they do.</p>						

Any other comments

The checklist items cannot be entirely comprehensive. Write down any other important points below.
